

## How to add static routes in Windows Server 2008 R2

- Open CMD (elevated only - Run As Administrator)
- To display existing routes type: *route print*

### EXAMPLE:

*route add 1.1.1.10 mask 255.255.255.255 10.0.1.1*

Where first destination IP, mask if single IP than /32 (.255) and then the next hop (other server)

So the example would be:

*route add 192.168.10.15 mask 255.255.255.255 192.168.10.254*

- To delete the route: *route delete 192.168.10.15*

### IF YOU WISH TO SPECIFY THE INTERFACE ROUTE WILL USE DO THIS:

*route add 192.168.10.15 mask 255.255.255.255 192.168.10.254 if 1* (where 1 is the interface number). You can see the interface numbers when route print.
