

cPanel How to increase /tmp and /var/tmp size - Re: The file system /tmp, which is mounted at /var/tmp, has reached critical status because it is full.

What size is your /tmp partition? You can resize it if it isn't large enough. Many servers have only 500MB for /tmp which isn't large enough and should be around 2GB instead. You could edit /scripts/securetmp for this line:

Code:

```
my $tmpdsksize      = 512000;      # Must be larger than 250000
```

Change to this line for 2GB:

Code:

```
my $tmpdsksize      = 2097152;    # Must be larger than 250000
```

Save the file (:wq), then run these commands to resize /tmp partition:

Code:

```
umount -l /tmp      umount -l /var/tmp  rm -fv /usr/tmpDSK  /scripts/securetmp
```

Would you like to secure /tmp & /var/tmp at boot time? (y/n) y

Would you like to secure /tmp & /var/tmp now? (y/n) y

Securing /tmp & /var/tmp

/tmp is already secure

/var/tmp is already secure

Checking fstab for entries ...Done

Logrotate TMPDIR already configured
