

How to open files from unknown developers without a warning in OSX?

You can disable Gatekeeper in System Preferences:

This removes the warnings about opening files downloaded from the internet:

```
defaults write com.apple.LaunchServices LSQuarantine -bool false
```

It doesn't affect the dialogs about opening applications for the first time though.

You can run Finder as root with `osascript -e 'quit app "Finder"' && sudo /System/Library/CoreServices/Finder.app/Contents/MacOS/Finder`, but it's not really meant to be done permanently.
