

## MySQL error: Field doesn't have a default value - ClipBucket - Clip-bucket

### Clip-bucket Field 'action\_link' doesn't have a default value

or

### MySQL error: Field doesn't have a default value

When inserting a new record with varchar or text field that is required and has no default value. This error will display for example: error : Field 'description' doesn't have a default value

The possible reason is that sql-mode in my.ini is set to STRICT\_TRANS\_TABLES,NO\_AUTO\_CREATE\_USER,NO\_ENGINE\_SUBSTITUTION.

Change the value to  
sql-mode = ""

Update 2011/4/25:

Add Default value "" if possible to avoid changing mysql setting.
