How to Redirect HTTP to HTTPS with IIS 7

In IIS, to redirect (force) HTTPS on every HTTP request, do the following.

Before you start, make sure you have the following done;

- IIS 7 installed
- Microsoft URL Rewrite Module installed
- Create HTTPS bindings to your IIS website and assign certificate
- Ensure Require SSL is NOT checked under SSL Settings for your website

Once you have this done you can simply copy and paste the following code between the and tags in your your **web.config** file in your website root directory.

Please note if you already have some rules in you **web.config** file, make sure to put the bellow rule within . Every rule ends with and then all rules end with , so make sure not to put this rule inside another rule.

Now save the **web.config** file and it's all done.
